GoPDF2 Feature Showcase

This paragraph demonstrates bold, italic, underline, strikethrough, background highlight, warnings, subscripts H_2O, superscripts x^2, and links — all rendered from HTML.

Justified text spreads to fill the full column width so that both margins align cleanly, exactly like professional typesetting engines do with long paragraphs of body copy spread across multiple visual lines of output in this demonstration document.

Styled Table

GDP Table

Region	2023	2024	Growth
Asia-Pacific	31,200	32,850	+5.3%
North America	28,900	29,710	+2.8%
Europe	58,100 combined		+1.9%
	Western	41,000	+1.7%

Lists

B. Ordered item with nested content:
   - Nested bullet one
   - Nested bullet two

C. Second ordered item

```
func main() {
fmt.Println("preformatted") // whitespace preserved
}
```

Entities: © — “quotes” αβγ ≤ ≠ ∞

Mathematics

The famous identity: $E = mc^2$ and the Gaussian integral appear in the formula section below, followed by Greek letters and operators.

Block Background

A block-level background draws a full-width band behind every line — this text sits on a light shade that wraps across lines, supports pagination, and never covers the glyphs themselves.
Justified filler paragraph number one to push subsequent tables past the page boundary while keeping every rendered line aligned on both margins for the demonstration.

中文排版

中文文本在没有空格的情况下也能正确换行，而且标点符号不会出现在行首， 这是排版引擎遵循避头尾规则的效果。长文本会自动换行并保持可读性。

Formula rendering (LaTeX-lite subset):

$$E = mc^2$$

$$\int_{-\infty}^{\infty} e^{-x^2}\,dx = \sqrt{\pi}$$

$$\sum_{k=0}^{n} \left\langle {n \atop k} \right\rangle = 2^n$$

$$\frac{\partial^2 u}{\partial t^2} = c^2 \nabla^2 u$$

$$a^2 + b^2 = c^2 \quad (\text{ABC})$$

中文与公式混排

中文排版测试：质量守恒定律可以表示为 $E = mc^2$，并且当 $x \to \infty$ 时极限存在。

表格中的中文：
